

••• Sure stopping straight out of the box

GENERAL CT
with NVH Control

FIT WITH CONFIDENCE

Bendix General CT are general purpose disc brake pads for passenger vehicles, specifically suited for general suburban, city and freeway driving.

••• EXCLUSIVE FEATURES

with NVH Control

Quieter, cleaner, consistent performance

Bendix General CT pads are manufactured using a premium ceramic formulation for superior noise, vibration and harshness (NVH) control. The benefits are significant – consistent pedal feel all day long, enhanced durability, high fade resistance, reduced noise and vibration, minimal dust and improved stopping performance. General CT are safer and surer from the first stop to the last.

Instant friction... no bedding-in

Bendix General CT pads feature a unique Titanium Stripe to provide instant friction and no bedding in. It means positive pedal feel and sure stopping power from the minute you drive out of the workshop. No bedding in also means considerable hours saved each year for workshops plus, General CT brake pads can dramatically extend rotor life by producing a film that protects the rotor surface.

••• Bendix General CT – with NVH Control

Multiple formulations. Consistent superior performance.

Bendix Australia, as part of a global organization, has access to the very latest ceramic technology from Europe and the US, so the General CT range is made from compounds proven over many millions of kilometres.

Each compound is designed for specific applications using premium ceramic formulations for superior noise, vibration and harshness (NVH) control. So when you order a General CT reference, you know the compound has been exclusively formulated and tested for that particular application.

Ceramic technology. Quieter and cleaner.

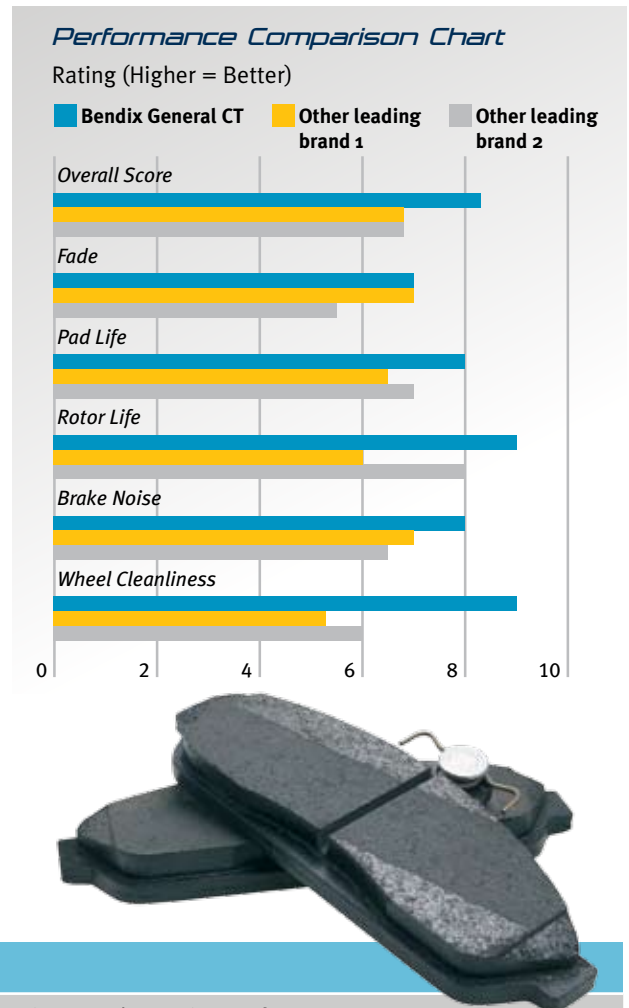

It goes without saying that drivers do not like dust or noise. The General CT range keeps both of them to a minimum through OE geometry and material composition.

Working better out of the box.

Bendix General CT features a unique Titanium Stripe providing instant friction to deliver sure stopping power without bedding in, and this means great pedal feel out the box.

The Titanium Stripe actually accelerates the pad/rotor surface mating process of “burnishing” or bedding in.

The bedding-in process takes place under normal driving conditions as the coating wears away after approximately 50 stops.

	Features	Benefits
Leading Technology	••• Ceramic Technology	••• Latest friction technology giving improved stopping performance, low dust, low rotor wear and enhanced durability
	••• Titanium Stripe	••• No bedding-in required meaning less down time and improved customer satisfaction. Instant pedal feel from the first stop
	••• NVH (Noise, Vibration & Harshness) Control	••• Product engineered and tested to eliminate noise & vibration
Best Range	••• Designed for passenger vehicles	••• Specifically suited for general purpose usage giving a more consistent pedal feel
	••• Wide Range	••• More than 500 references available covering the majority of Light, Small, Medium and Large vehicles
Warranty	••• Premium Quality Product to protect new vehicle warranty*	••• Fitting this product does not void your new car warranty*

*If a part is non-genuine, but is interchangeable with the genuine part, it could be seen as being fit or appropriate for the purpose and would therefore not void the manufacturer's warranty. * Source: Australian Competition & Consumer Commission (ACCC) ruling published in Consumer-Express publication, April 2005, Issue 1445-9671
